(54) Title: PORTABLE POWERED CUTTER

(54) 発明の名称: 携帯式動力刈払機

(57) Abstract: A portable powered cutter has an operation tube (10), a transmission shaft (40) inserted in the operation tube (10), and a rotating blade (31) supported through a blade holder (30) connected to the head section of the operation tube (10). Rotation output from a power source is transmitted to the rotating blade (31) through the transmission shaft (40) to rotate the blade. The blade holder (30) swings against predetermined resistance about a lateral axis (44) perpendicular, in a plan view, to the axis of the operation between the control of the control of the operation tube (10) to the blade between the control of the remainisation shaft (40) has flexibility in at least a portion from the head section of the operation tube (10) to the blade
